Greeting for 1932

BUSINESS last season (1931) was, generally speaking, very satisfactory indeed. We distributed more seeds to our customers than ever before, although at less profit, perhaps, because of our radically reduced prices and liberality in filling orders. We have been busy planning for the coming season and

YOU WILL BE INTERESTED

in our revised values, with prices scaled down wherever possible, because we are interested in doing our part to meet the prevailing economical conditions and anticipate the future with courage.

We have added many interesting varieties of Flower Seeds to our list and have put them up in attractively colored packets, showing how beautiful they are.

Note our special reduction on Flower and Vegetable Seeds in assorted packets of your selection in one order as follows:

10c pkts. Assorted, your selection, 5 pkts. or more, at 7c each

15c pkts. Assorted, your selection, 5 pkts. or more, at 12c each

In ordering pkts. offered above, use the net amount on order sheet.

Our prices of Flower and Vegetable Seeds, other than those noted, have been revised downward. They are very low and net as quoted, except we allow the usual liberal discount for cash on early orders for Vegetable Seeds in quantity, and a reasonable time to old and new customers on approved credit.

OUR OWN BULK SEEDS

Sometimes customers ask "Do you have loose or bulk seeds?" Sure! Our seeds are produced by practical seed-growers, largely in the western states, including California. After harvest they are shipped to us in bulk. In the winter months we put them up in attractive packages, carefully labeled, ready for our customers.

WE GUARANTEE the seeds we sell to be true to name and of high germination. Seeds **MUST** be right, but it is just as necessary that the soil be suitable and well prepared, that the planting be done properly and at the right time, and that the weather be not too unfavorable.

By test we know that these seeds are of good vitality. To you is given to select the varieties, to prepare the soil and to give them proper care. Providence alone governs the weather.

Without additional cost to our customers, we guarantee the safe arrival at your home of the orders you send to us. Order early! Order all you can!

Popular Flower Seeds

Each year the interest in flowers for garden and home decoration increases and more people turn to the growing of flowers for recreation and pleasure. Flower-lovers will find a number of new varieties in our lists this year, as well as all of the old friends. We have devoted most of our attention to the "annuals," that is, the kinds which grow, produce flowers, mature, and die the same season, since these are generally found most satisfactory in the average garden. Among the annuals are flowers for every purpose, tall and low-growing, trailing and climbing, for cutting and for garden display. All Flower Seeds are sent postpaid to your door.

All varieties not designated by HP are annuals, blooming the first season

FERTILIZERS MAKE FLOWERS GROW AND BLOOM

Most annual flowers, due to their short season of growth and profuse bloom, are heavy feeders and require an abundance of a quick-acting fertilizer. Nitrate of Soda and Sheep Manure are particularly adapted for this class of plants. The Sheep Manure should be applied at the time of planting; the Nitrate of Soda several times during the season. The perennial plants are slower growers and for that reason the less active fertilizers, such as Bone-Meal and our Special Garden Fertilizer, meet their requirements. Either should be applied at time of planting and supplementary applications should be made during the life of the plant. For prices see page 28.

What Seed to Plant in the Rock-Garden

A rock-garden can be developed in different ways: all annual flowers from seed, all hardy perennial flowers from seed, or a combination of both. A combination of annuals and perennials is usually considered the best, because most of the low-growing and creeping hardy plants bloom early in the season. Unless at least half of the plants chosen are late summer and fall blooming, your garden will lack color after August 1. It is for this reason we advise using certain colorful annuals.

Of course, there are a few varieties of suitable hardy plants that flower late, and many of those that flower early have attractive foliage all season. In fact, some of the best plants for the rock-garden are used chiefly for their attractive foliage.

You may, of course, raise many of the hardy plants from seed, as most of them grow very easily. There are a few varieties, however, that require several weeks or even months to germinate. It is generally best to start the seed in boxes and later transplant them into the rockery. The most satisfactory varieties to grow from seed are here described. Planting a rock-garden is really a never-ending process of collecting rare, new, and suitable plants. This is what makes it a continual joy.

Laxton's Progress Pea

Garden Peas of Special Merit

SELECTED FOR OUR CRITICAL TRADE

Don't stick to the old, antiquated varieties of Peas; surprise yourself with some of the newer and better sorts. Our list embraces the newest and highest types in Pea culture

Sow the earliest varieties, such as Alaska, as soon as the ground can be worked in the spring. Follow with Laxton's Progress, Hundredfold, Thomas Laxton, and World's Record as soon as the ground becomes warm. The wrinkled varieties cannot stand as much cold as the smooth sorts. Later varieties, such as Dwarf Telephone and Tall Telephone, should be sown later so as to provide for a succession. For best results, Peas should be sown at the rate of about 1 quart to 100 feet of row.

Inoculate
this seed with
NOD-O-GEN

PEAS ARE DIFFERENT FROM ALL OTHER VEGETABLES—the seeds are large and only one stem grows from each seed. They do not tiller; the plant is not bushy. They must be planted close together—12 to 16 seeds to the foot.

While a 5-cent packet of lettuce or radishes might suffice for the family garden and yield sufficient portions for numerous meals, a like amount of Peas will not. It requires 1 pint to plant 50 feet of row. Peas form a profitable crop to grow. Plant all you have room for.

OUR POLICY: Reliable Seeds, Reasonable Prices

Little Marvel Peas

Laxton's Progress. *The earliest and largest Dwarf Pea.* This is the earliest of the highest quality large-podded dwarf varieties. The vines are 15 to 18 inches high and very productive. Matures Peas two to four days earlier than Blue Bantam (Hundredfold).

Blue Bantam or Hundredfold. The dwarf, vigorous vines average 16 to 18 inches in height and carry really enormous crops of most luscious flavor.

Thomas Laxton Improved. The popular market Pea. As a money-maker, it surpasses all others. An early, sweet, wrinkled Pea of the highest quality, ready for market a few days later than Alaska, even though sown several weeks later. Height, 3 feet.

World's Record. An improved Gradus, being slightly earlier, more dwarf, true to type, and productive. Vines moderately stout, medium green, pods medium green, 4 inches long, fairly broad, pointed and well filled with seven to nine very large, dark green Peas of exceptional quality. Height, 2 feet.

Little Marvel (Dwarf). As a large-yielding, short-vine variety, Little Marvel stands at the head of its class. A dwarf, first-early Pea of unusual value, desirable for both the home-garden and market. Height, 18 inches.

Alaska. (Blue seed.) Earliest of all Peas. This variety can be planted as soon as the frost is out of the ground. Pods dark green and well filled. Height, 2½ feet.

Dwarf Telephone. This medium-late Pea is of healthy, stocky growth, with dark green vine and foliage, and very productive. A desirable garden Pea. Height, 2½ feet.

Improved Telephone. The vines are vigorous and pods 4½ inches long, well filled with eight to ten extra-large Peas of highest quality. Height, 4 feet.

Mammoth Melting Sugar. (Edible pods.) Large, broad pods, very brittle and stringless. Height, 4 feet.

SPECIAL LOW PRICES ON ABOVE VARIETIES OF PEAS: ½pt. 15 cts., pt. 30 cts., qt. 50 cts., 4 qts. \$1.75, pk. \$2.75, bus. (56 lbs.) \$10.80

The Part Fertilizers Play in the Development of Plants

Fertilizers are the bread, meat, and milk in the diet of plants. There is nothing mysterious about fertilizers. Plants must be fed. If the soil in which they are grown is deficient in plant-food, it must be supplied, and in such quantities as the plant can assimilate.

Commercial fertilizers are sold upon the analysis of plant-food they contain, the condition, mixing, and age of the material entering their composition.

The three principal plant-food elements contained in fertilizers are nitrogen, phosphoric acid, and potash. Nitrogen (ammonia) induces a quick, luxuriant growth of stem and leaf. All leafy quick-growing plants require it in an abundant available form.

Phosphoric Acid induces extensive root-development, a profusion of stems and blossoms, hastens maturity, fills out grains and seeds, and causes the plant to have a strong, sturdy, healthy appearance.

Potash strengthens the structure of the plants, colors the fruit and flowers, helps the plant to ward off diseases, and improves the flavor and quality.

Pulvex

Kills the fleas instead of stupefying them, and keeps them off 7 to 14 days afterward. It is ideal for cats. Ordinary flea powders often make a cat sick from licking itself, but Pulvex will positively not do this; neither will it irritate the skin. It is inexpensive too, for, being fluffy, Pulvex goes further than the ordinary flea powder and therefore is cheaper. 50 cts.

Kow-Kare, The Great Cow Medicine

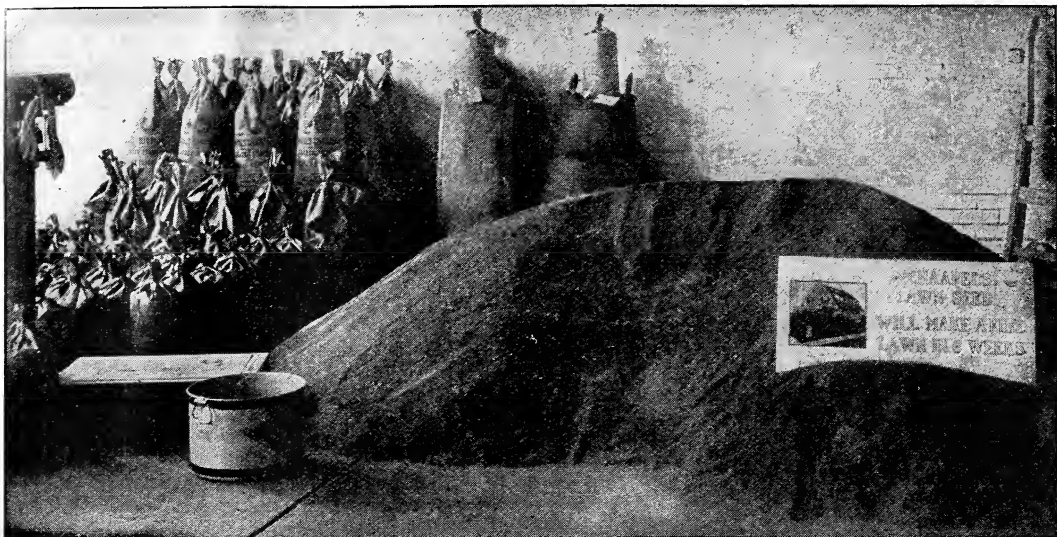

Most dairy cow ailments are simple if the source of the trouble is reached. If the organs of production or reproduction are not doing their duty, try Kow-Kare—the medicine for run-down cows. It is especially recommended for the prevention and cure of Abortion, Barrenness, Milk Fever, Scouring, **Garget**

While primarily made up for normal locations, it contains certain grasses that will thrive in partially shady places. Sow 1 quart to 200 square feet (10 x 20 ft.). Pt. 15 cts., qt. 30 cts., 2 qts. 55 cts., 4 qts. \$1, pk. \$1.75, bus. (30 lbs.) \$7, 100-lb. lots or over, 28 cts. per lb. Postage extra.

Chaapel's Shadygreen Lawn Seed
